NUS, JTC CORP SET UP INDUSTRIAL RESEARCH CENTRE

The National University of Singapore (NUS) and JTC Corporation have set up a new joint research centre to promote innovative and sustainable industrial infrastructure solutions in Singapore.

An agreement was signed yesterday for the new NUS-JTC Industrial Infrastructure Innovation Centre (NUS-JTC I3 Centre).

The centre will leverage NUS' technological knowledge in areas such as built environment, environmental engineering and real estate, with JTC's infrastructure and business experience.

The chief executive officer of JTC Corporation, Mr Manohar Khiatani, said Singapore is constantly being challenged to introduce sustainable solutions to optimise land use to support its industrial development and economic growth.

The JTC-NUS partnership paves the way to keep pushing limits of possibilities, try new ideas and chart new frontiers with innovative real estate solutions. CHANNEL NEWSASIA
